

Struggling with

- Identification of parts during the manufacturing of goods ?
- White rust on Bezinal[®] coated wire ?
- An awareness of old fashioned products that need restyling ?
- The price of high quality plastic coated products ?

Try **Bezinal[®] Color**

Bekaert's colour finish
for Bezinal[®]

Advantages:

- Increased lifetime
- Suppression of white rust formation

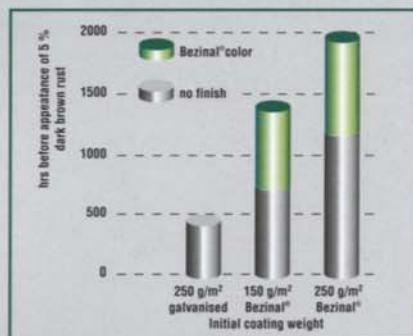

Technical data

Accelerated corrosion tests prove the superior corrosion performance of Bezinal®Color.

Humidity test
(DIN50017) after 500 hrs

Salt spray test (DIN50021, ASTM B117)

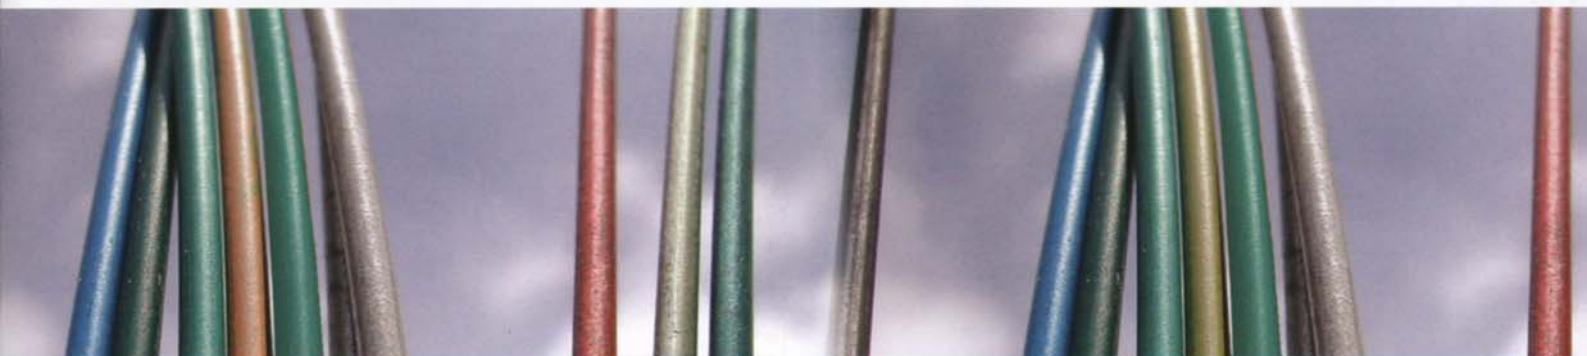

These tests reveal that Bezinal® Color and Bekacolor® will last longer – esp. Bezinal® Color is suitable when a long life in severe climates is wanted. The thin coating still allows welding.

- ✓ Bezinal®Color is available in a multitude of colours.
- ✓ UV radiation tests prove the colour stability for outdoor use.
- ✓ The thin surface finish is deformable into complex shapes.
- ✓ Welding possible.
- ✓ The coating withstands stress relieving temperatures.

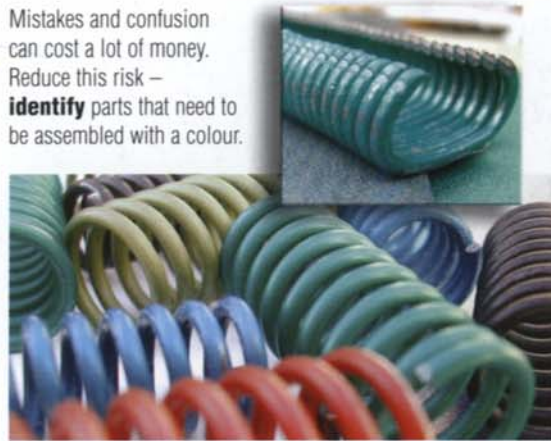

Note:

The absence of toxic chemicals such as hexavalent chromium means that Bezinal® Color is a 'green' product

Respect the colour of nature - integrate your fencing system in the landscape. Conversely, injuries can be avoided when visibility increases.

Mistakes and confusion can cost a lot of money. Reduce this risk – **identify** parts that need to be assembled with a colour.

Improve the attractiveness of a product with a colour, or with a coating that suppresses the formation of white rust.

Bezinal®Color – the next step forward in prolonging the **lifetime** of zinc and Bezinal® coated wire products.

Identify YOUR product to create your own style in the market, to clearly differentiate from competition or even to avoid theft.
